Outline

- Biography
- Journal Publications
- Publication & Awards Summary
- □ Projects
- Research Interests
- Detailed Research Topics

Biography

- □ Undergraduate (87~91): Aerospace engineering, NCKU
 - Orbital mechanics
- Master (94~96): Operations Research Center, MIT
 - Premultiplier network simplex algorithm under Prof. Orlin
- Researcher (96~97): Network system lab, Fujitsu, JP
 - Optical network wavelength routing & assignment algorithm
- □ Ph.D. (98~03): ISyE, GA Tech
 - Shortest paths and multicommodity flows under Prof. Johnson
- □ Assistant professor (03~07) : IIM, NCKU
- □ Associate professor (07~): IIM, NCKU

Publications (1/3)

Journal papers

- Wang, I.-L., E.L. Johnson, J.S. Sokol, 2005, <u>A multiple pairs shortest path algorithm</u>, *Transportation Science*, 39(4), pp. 465-476. (SCI/SSCI)
- Sheu, R.L., M.J. Ting, I.-L. Wang, 2006, <u>Maximum flow problem in the distribution network</u>, *Journal of Industrial and Management Optimization*, 2(3), pp. 237-254. (SCI)
- Wang, I.-L., W.-C. Yang, 2007, Fast Heuristics for Designing Integrated E-Waste Reverse Logistics Networks, IEEE Transactions on Electronics Packaging Manufacturing, 30(2), pp. 147-154. (SCI)
- Wang, I.-L., 2008, <u>Distribution of Small Packages in Metropolitan Area by Motorcycle Courier Services</u>, *International Journal of Integrated Supply Management*, 4(1), pp. 88-101.
- Wang, I.-L., 2008, On solving shortest paths with a least-squares primal-dual algorithm, Asia-Pacific Journal of Operational Research, 25(2), pp. 135-150. (SCI)
- Wang, I.-L., Y.-H. Yang, 2009, On Solving the Uncapacitated Minimum Cost Flow Problems in a Distribution Network, International Journal of Reliability and Quality Performance, 1(1), pp. 53-63.
- Wang, I.-L., S.-J. Lin, 2009, <u>A network simplex algorithm for solving the minimum distribution cost problem</u>, <u>Journal of Industrial and Management Optimization</u>, 5(4), pp. 929-950. (SCI)

Publications (2/3)

Journal papers

- Wang, I.-L., Y.-C. Tsai, F. Li, 2011, <u>A Network Flow Model for Clustering Pavement Segments with Minimum Total Costs</u>, *Computers & Industrial Engineering*, 60(4), pp. 593-601. (SCI)
- Wang, I.-L., C.-Y. Chang, 2011, <u>Mathematical properties and an integer programming model on haplotyping populations by pure parsimony</u>, <u>Mathematical Biosciences</u>, 231(2), pp.120-125. (SCI)
- Wang, I.-L., H.-E. Yang, 2011 Apr, <u>Haplotyping populations by pure parsimony</u> <u>based on compatiblegenotypes and greedy heuristics</u>, *Applied Mathematics and Computation*, 217(23), pp. 9798-9809 (SCI)
- Wang, I.-L., T.H. Yang, Y.-B. Chang, 2012, <u>Scheduling two-stage hybrid flow shops</u> with parallel batch, release time, and machine eligibility constraints, *Journal of Intelligent Manufacturing*, 23(6), pp.2271-2280 (SCI)
- Wang, I.-L., Y.-C. Wang, C.-W. Chen, 2013, <u>Scheduling unrelated parallel machines</u> in semiconductor manufacturing by problem reduction and local search heuristics, *Flexible Services and Manufacturing*, 25(3), pp.343-366 (SCI)

Publications (3/3)

- □ Journal papers (by 2013.09.29)
 - Shu, J., M.C. Chou, Q. Liu, C.-P. Teo, I.-L. Wang, 2013, Models for Effective
 Deployment and Redistribution of Bicycles within Public Bicycle-Sharing Systems,
 Operations Research, (accepted in Aug. 2013) (SCI/SSCI)

Publications & Awards Summary

- □ Summary of publications (by 2013.09.29)
 - Int. Journal: 11 (SCI/SSCI: 11; non-SCI: 2)
 - Int. Conference (outside TW): 13
 - Int. Conference (inside TW): 23
 - Dom. Conference: 26
- Awards Received (by 2013.09.29; from 26 master students; 4 undergraduate groups)
 - INFORMS RAS Problem Solving Competition Award
 - 1 finalist (top 3@2011); 2 honorable mention (top 4@2010,2013);
 - Master Thesis / Best Paper Awards (served as thesis advisor / co-author)
 - **22** awards (8 1st place; 2 2nd place; 1 3rd place; 1 fourth place; 10 best papers)
 - By ORSTW: 9; CIIE: 9; CIT: 1; DHL: 1; Automation: 1; ICLS: 1
 - Undergraduate Projects Awards (served as thesis advisor / coauthor)
 - 4 awards (2 first place; 1 second place; 1 best papers)
 - NSC Awards
 - 1 poster award; 1 Grantee of Research Project for Outstanding Young Researchoster (by NSC IE Division)

NSC Research Projects

Multiple Pairs Shortest Paths Algorithms

NTD 362,800

NSC 92-2213-E-006-094

New column generation and partitioning methods for multicommodity network flow problems

NTD 509,900

NSC 93-2213-E-006-096

New nonnegative least squares primal-dual methods for network optimization problems

NTD 150,000

NCKU 950104

On solving the minimum distribution cost flow and maximum distribution flow problems

NTD 651,000

NSC 95-2221-E-006-268

Haplotyping population by optimization theorems and algorithms (I)

NTD 590,000 NSC 96-2221-E-006-015

Haplotyping population by optimization theorems and algorithms (II)

NTD 585,000

NSC 97-2221-E-006-173

Projects (2/4)

 A Study on Reliability for Distribution Networks with Multi-state Capacitated Arcs

NTD 1,279,000

NSC 98-2410-H-006-115-MY2

A Study on the Network Design and Bike Repositioning for Urban Bike Sharing Systems

NTD 984,000

NSC 100-2410-H-006-006-MY2

 Design and Repositioning Strategies for the Public Bike and E-scooter Sharing Systems (Outstanding Young Researcher Grant)

NTD 2,124,000

NSC 102-2221-E-006-141-MY3

Projects (3/4)

■ NSC Undergraduate Student Projects (大專生專題計畫)

 Design of a Trip Planning Decision Support System for Public Transportation in a Metropolitan Area

NTD 47,000

NSC 96-2815-C-006-065-H

 Computational Experiments by a Dual-Primal Non-negative Least Squares Method for Maximum Flow Problems

NTD 47,000

NSC 97-2815-C-006-031-E

- Planning Optimal Bike Routes based on Target Calories Burned
 NTD 47,000
 NSC 98-2815-C-006-107-H
- Solving the tagSNP Selection Problem by Bi-objective Programming
 NTD 47,000
 NSC 98-2815-C-006-048-E
- A Simulation Study on the Management of Public E-scooter Sharing Systems for Commuters

NTD 47,000

NSC 101-2815-C-006-063-E

Projects (4/4)

Industry Project

- 300mm 晶圓廠即時性生產排程系統導入計畫 (TSMC) NTD 500,000
- 臺南市觀光自行車系統設置規劃案 NTD 450,000

Research Interests (1/3)

Network Optimization

- Shortest Path
- Maximum Flows
- Min-cost Flows
- Multicommodity Network Flows
- Distribution Networks (D-node)

Logistics, Supply Chain Management

- Reverse Logistics Network Design
- Metropolitan Motorcycle Courier Systems
- Public Bicycle Sharing Systems

Bioinformatics

- Haplotype Inference
- TagSNP Selection

Research Interests (2/3)

Personal Navigation

- Quickest Itinerary Planning with/without Timetable
- Minimum Fare Itinerary Planning without Timetable
- Optimal Biking Routes with a Target Range of Calorie Consumption
- Optimal Euler Subgraphs of bounded lengths

Network Reliability

Reliability for Multi-state Capacitated Manufacturing Networks with Distillation Process

Semiconductor Manufacturing

- 1-stage Complex Job-Shop Scheduling with recipe, release time, due date, and setup time consideration
- 2-stage Complex Job-Shop Scheduling with recipe, release time, due date, and batch process (2 jobs of the same recipe) consideration

Data Mining

Change Mining

Research Interests (3/3)

Project Management

Stable project baseline schedules with time constraints

Staff Rostering

- Designing a Nurse Rostering Information System for Site Management Organizations
- Railway Staff Rostering and Re-rostering Problem

Pavement Optimization

- Project level
- Network level

Telecommunication

- Optimal wavelength assignment & routing algorithm
- Sensor Network

Network Optimization (1/2)

■ Shortest Path:

- Multiple Pairs Shortest Path (MPSP) algorithms, O(n³), paper
- Primal-Dual Nonnegative Least Squares algorithm (PDNNLS)
 == Dijkstra's method, for nonnegative arc lengths, paper
- All Pairs Shortest Path (APSP) algorithm, O(n³),
- Computational Experiments on MPSP algorithms,

■ Maximum Flows:

- DPNNLS algorithm, solve the max-flow by Kirchhoff's laws, O(m⁵n),
- Augment flows proportionally, O(mn²),

Network Optimization (2/2)

- Min-cost flows:
 - premultiplier network simplex algorithm (my master thesis)
- Multicommodity Network Flows: (my ph.d. thesis)
 - comprehensive survey
 - primal-dual column generation method
- Minimum Distribution Cost Problem: (Distillation, D-node)
 - shortest path, UMDCP1, UMDCP2, UMDCP3, paper
 - max-flow & generator
 - min-cost network simplex method, detailed graphical operations, paper

■ Reverse Logistics Network Design

 facility location with different configurations; greedy heuristics, paper

■ Metropolitan Motorcycle Courier Systems

- Monopoly performance estimation, paper
- Cournot game, 2 competitors, 4 scenarios (HS, PP)
- determine the most profitable HQ/LQ service percentages
- *new network models without hub

□ Public Bicycle Sharing Systems

- site location selection
- bike transshipment management to satisfy demand
- bike transshipment management considering advertisement exposure
- persistency model in site location (a QIP)
- dynamic bike repositioning based on proportional demands
- simulations for evaluating info sharing
- temporary manpower allocation vs. self bike repositioning
- simulation optimization on several important decisions
- E-scooter sharing systems

Bioinformatics

□ Haplotype Inference

- compatible relation, merged genotype pairs (MGP)
- greedy selection with Clark's rule

□ TagSNP Selection

- bi-objective mathematical programming to select tagSNPs with larger LD values
- Lagrangian Relaxation heuristics
- IP model to select robust tagSNPs for capacitated bio-chips

Personal Navigation Systems

- Quickest Itinerary Planning without Timetable
 - modeled as a constrained shortest path problem, given max # transfers
 - LR, KSP, preprocessing
- Quickest Itinerary Planning with Timetable
 - without transfer upper bounds, with/without Walk
 - shortest path on an acyclic graph, topological ordering algorithm with BFS/DFS speed-up techniques
- Minimum Fare Itinerary Planning without Timetable
 - shortest path on a complete graph, Dijkstra's algorithm with BFS/DFS speed-up techniques
 - models for special cases such as one free transfer after MRT, or "2stage" bus routing in a single trip
- Optimal Biking Routes with a Target Range of Calorie Consumption
- Optimal Euler Subgraphs of bounded lengths

Network Reliability

- □ Reliability for Multi-state Capacitated Manufacturing Networks with Distillation Process
 - a compaction preprocessing scheme
 - algorithms to calculate the reliability (difficulty: fractional flow, flow dependency)
 - min-cost network design with given reliability lower bound
- *Approximation algorithm for calculating reliability

Semiconductor Manufacturing

- □ 1-stage Complex Job-Shop Scheduling with recipe, release time, due date, and setup time consideration
 - MIP formulation, problem decomposition (into single stages)
 - greedy dispatching rule (load balance), heuristics to reduce the number of variables
 - heuristics that involves more scheduling rather than dispatching
- 2-stage Complex Job-Shop Scheduling with recipe, release time, due date, and batch process (2 jobs of the same recipe) consideration
 - MIP formulation, problem decomposition (into single stages)
 - greedy dispatching rule (FIFO)
 - heuristics that involves more scheduling rather than dispatching

Data Mining

Change Mining

given possible interruption duration with probability distribution, time-window

Project Management

- stable project baseline schedules with time constraints
 - given possible interruption duration with probability distribution, time-window & time-schedule constraints, 2 greedy heuristics & GA
 - project network generator

Staff Rostering

- Designing a Nurse Rostering Information System for Site Management Organizations
 - MIP formulation, greedy heuristics
 - an information system to verify schedules
- Railway Staff Rostering and Re-rostering Problem
 - MIP formulation, greedy heuristics

Pavement Optimization

- □ With Prof. Tsai in Civil Eng., GA Tech
- Project level (detailed work plan: which treatment, when, where)
 - segment clustering, give a network model, solved by topological ordering algorithm
 - with reliability idea, how to make a work plan such that the road condition meets the quality requirement with min-totalcost (also integrating the network level Markovian idea)
 - budget balance between working districts and political districts
- Network level
 - MIP formulation, how to allocate budget

E-learning

Grouping for better cooperative learning

- MIP formulation that groups students for cooperative learning
- considering mutual compensation based on conceptual graph and other criteria

Telecommunication

- Optimal wavelength assignment & routing algorithm
- Sensor Network
 - sensor network localization problem

Thank you! Q&A
